Description

Ultra-High Power over Ethernet (UHPOE) surge protection (also known as SPD or lightning protector) kit UHPSPK200 from Transtector, provides a solution in a box for the deployment of an outdoor Gigabit Ethernet, IEEE 802.3bt Power over Ethernet (PoE++) communication link between a PoE enabled PSE (power sourcing equipment) and a PD (powered device). Transtector SPDs that utilize state of the art hybrid SASD, GDT technology are provided to protect the equipment at each end of the link, while remaining transparent to data throughput. These surge protectors provide effective protection against electrical transient surges that are generated by lightning, and support long-term system reliability by safely shunting high amounts of transient energy while maintaining a very low clamping voltage. L-Com high-performance Cat6A twisted pair cables are provided to connect each surge protector to the equipment, as well as the span between the PSE and the PD. Transtector UHPOE surge protection kits are available in stock with same day shipping.
